

Quality Fiberglass Section – What is the cross-woven difference? It means that these aren't the same poles that broke on you the first time. The cross weave increases strength, durability and hold up to the test of time. It costs more than those pole that broke on you the first and we think the results are worth it. Our commitment to using the best materials we can helps you spend more time enjoying your trip and less time trying to figure out how to keep your tent up.

Need to know if the poles will work for the project you are working on? Check out this information on maximum bend radii:

Fiberglass Bend Radius Limits	
6.3mm	18" Radius
6.9mm	22" Radius
7.9mm	28" Radius
8.5mm	36" Radius
9.5mm	42" Radius
11mm	48" Radius
12.5mm	26" Radius

If you need help finding the bend radius of your pole try using this free online calculator before placing your order **Click Here** (link to: <http://handymath.com/cgi-bin/arc18.cgi?submit=Entry>)
